

Our Disaster Recovery Plan Goes Something Like This...

2002 Calendar

DILBERT™

By Scott Adams

S. Adams

Q: Do You z malo - you You made a backup before
upgrade?

A: Only cowards make backups!

Real men don't use backups, they post their stuff on a public ftp server and let the rest of the world make copies.

Linus Torvalds

Run-The-Business costs

Source: Forrsights Budgets And Priorities Survey, Q4 2013

*IT MOOSE = IT spending to maintain and operate the organization, systems, and equipment

DBA: Requirements

- Delivering improved performance.
 - Tuning and optimization takes nearly twice the effort on large databases (> TB) compared to smaller databases.
- Lack of staff resources.
 - The number of databases ^{has namesto are} are doubled (or quadrupled), _{the} number of DBAs has not increased proportionally.
- Data integration issues.
- High data volume growth.
 - The amount of data doubles every 18 month^s.

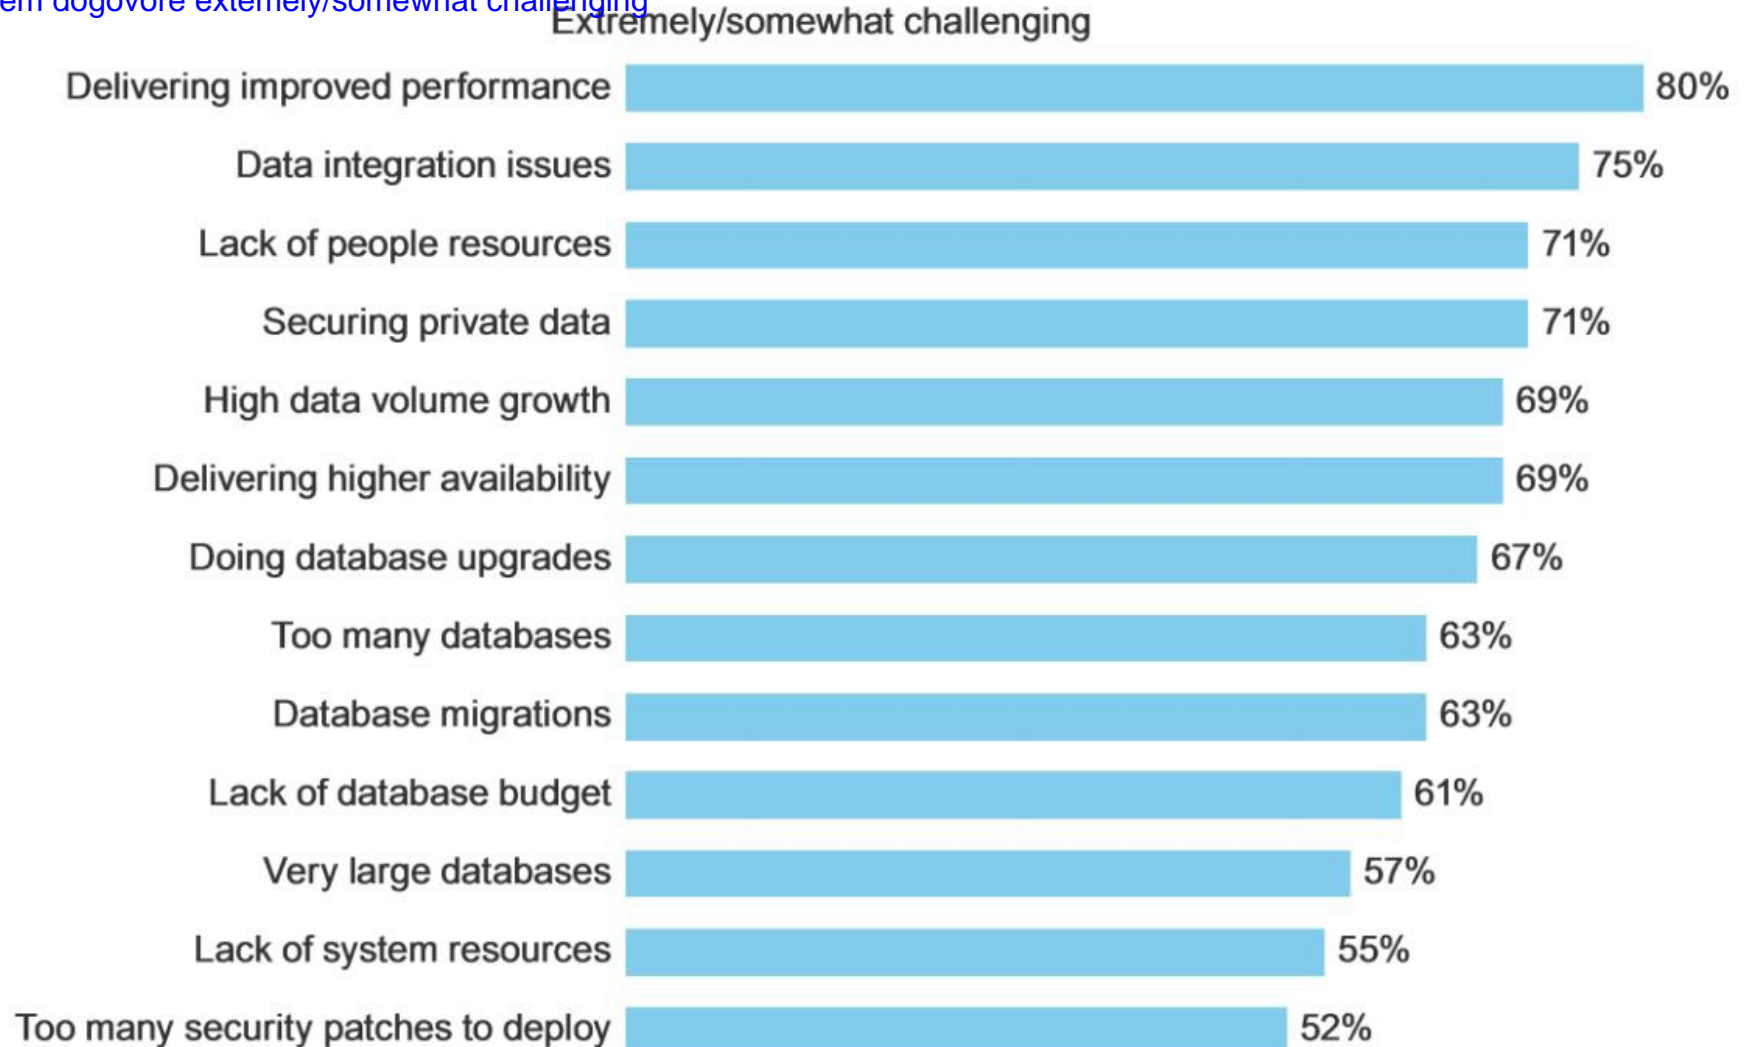

Key DBA issues

bolj primerno se zdi vprašanje How challenging are the key database management issue in your organization?

“What are the key database management issues you see as challenging in your organization?”

ker imaš potem dogovore extremely/somewhat challenging

Outsourcing DBA: benefits

- Lower database administration cost.
 - Number and size of databases constantly growing.
- Improved quality of database administration.
 - Automatic processes, procedur^es, proactive monitoring systems, applying best practices.
- Focus on business issues.
- Complement existing stuff.
- Improved SLAs.
 - 24x7 databases, minimize critical outages.

misliš tu na zaposlene - staff ali na stvari - stuff?

Outsourcing DBA: benefits (2)

“What benefits have you achieved by moving some or all of your database administration (DBA) management to an outsource vendor?”

Source: A commissioned study conducted by Forrester Consulting on behalf of Datavail, January 2014

Disadvantages

- Data - Are backups consistent and usable?
daljši pomišljaj kot na za etnih prosojnicah
- Pro-active monitoring and alerting tools (licenses).
- Security -- You have a person with access to your data.
zakaj tile dva pomišljala? daljši pomišljaj kot na za etnih prosojnicah
- Loss Of Managerial Control.
- Communication -- sometimes instructions are not followed properly.
zakaj dva pomišljala? daljši pomišljaj kot na za etnih prosojnicah

Define DBA Services (SLA)

- proactive checks (+ in-house developed);
- performance monitoring and/or optimizing;
- backup and recovery procedures;
- failover (disaster recovers) procedures;
- creating test and acceptance procedures;
- point-in-time procedures;
- security levels.

Inventory

- hosts (servers);
- databases;
- instances;
- relations (standby, audit, test, acceptance, PITR);
- environment (production, test, acceptance, development).

Data (backups)

- Check backup consistency and usability?
- Rman: validate backup.
- Setup new server and restore backup.
- Partial recover (some of the datafiles).
recovery?
- Export some data (tables) from backups?
- Test failed procedures?

- > Poslano: Ponedeljek, 4. November 2013 12:01:43
- > Zadeva: Testna predproduksijska baza
- >
- > Boris,
- s 1. januarjem bomo dali v produkcijo novo verzijo XXXX. Kako bi lahko naredili kopijo produkcijske baze, da bi izvedli test? Kopijo produkcijske baze bomo rabili večkrat, ker bomo teste večkrat izvedli, vedno pa rabimo svežo kopijo produkcije. Kaj vse bi morali postaviti (strežnike, ...), da bi to naredili?
- >

Point In Time Recovery

- Setup a new server and restore the backup (~~check backup reliability also~~ and in some cases time to restore).
- Open the standby database in read only mode (if we have old enough standby database).
- Import data or metadata from exports (if we have one).
- Time to complete the procedure?
- Cost (DBA work, server, ...)?

PITR – Abakus way

- Connect to the Backup server.
- Open the database from required backup in read only mode.
- Export or transfer via db link required data or metadata.
- Time to complete the procedure is measured in minutes!
- No DBA intervention! (no cost)

PITR – Abakus way (2)

Setup new database

- Setup database for test or acceptance.
- Prepare new server.
- Restore database from required backup.
- Time to complete the procedure?
- Cost (DBA work, server, ...)?

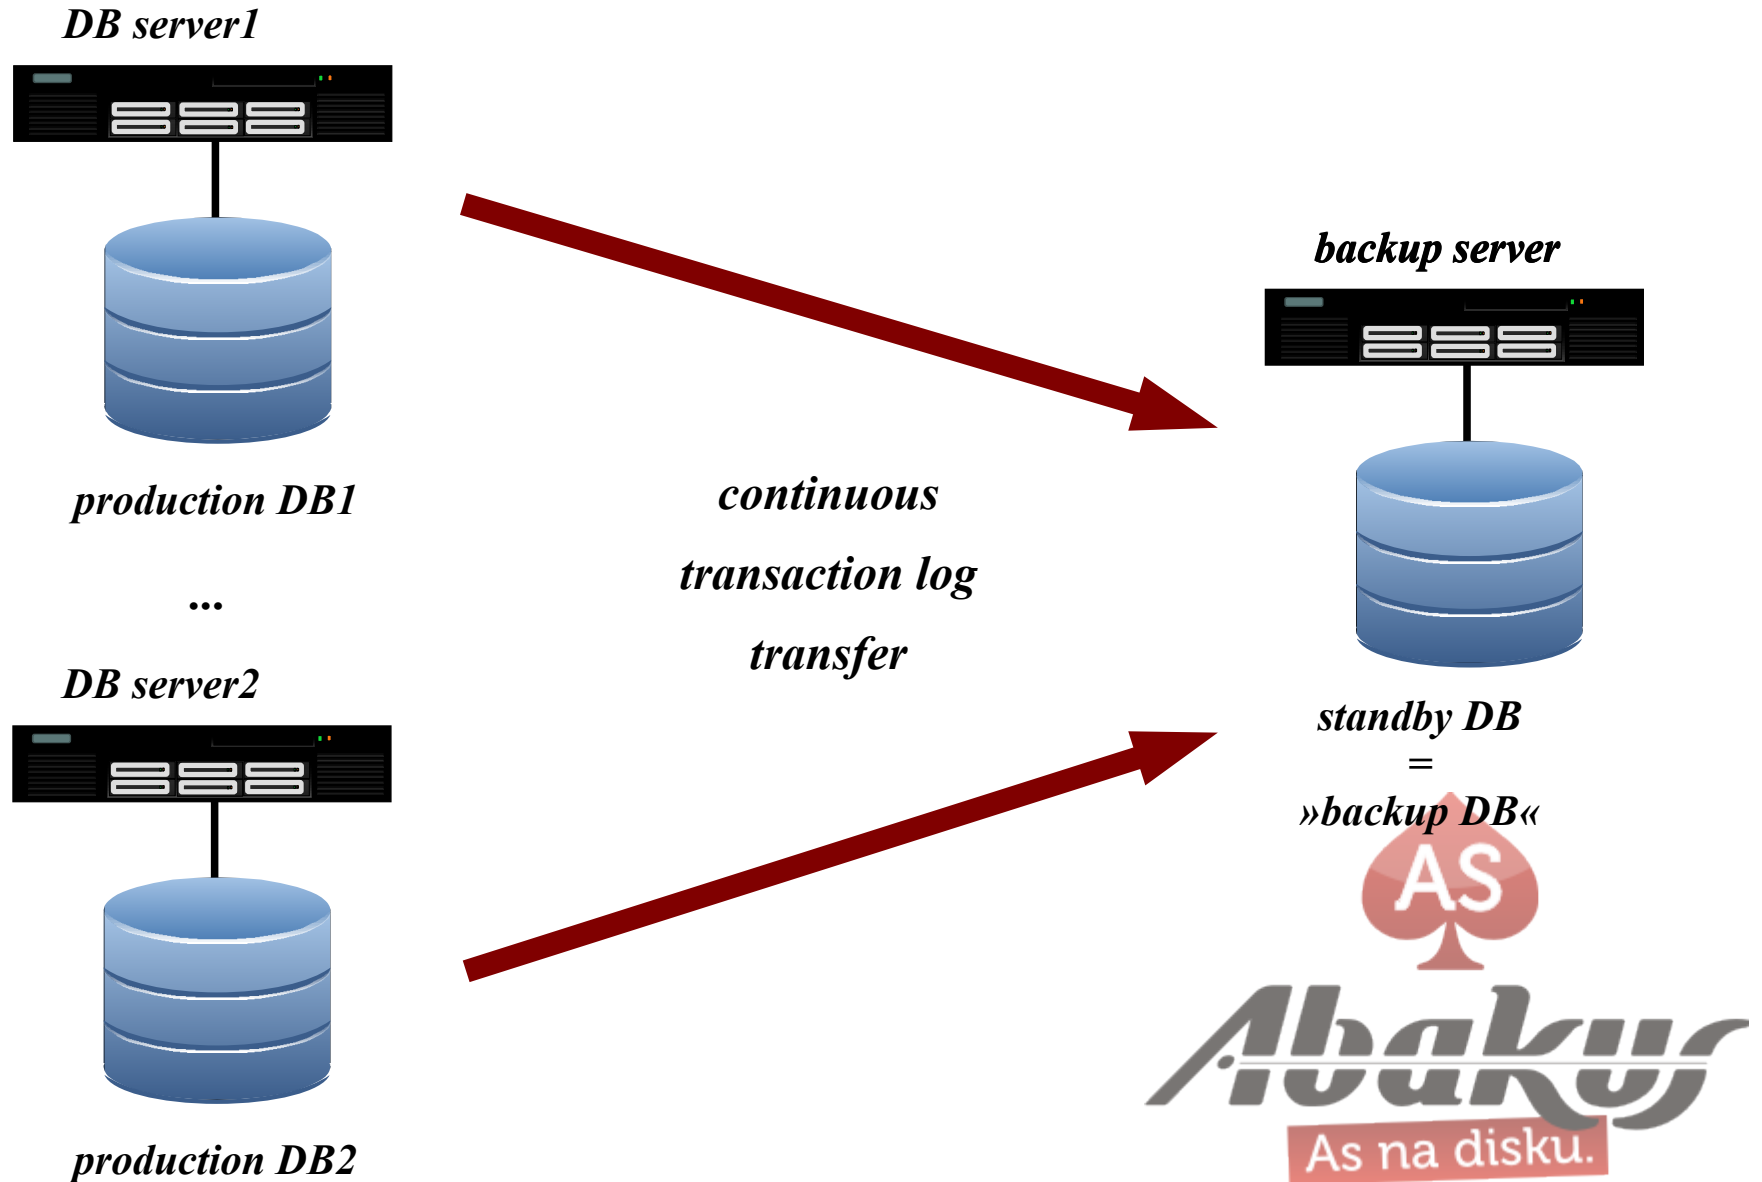

Setup DB: Abakus way

- Connect to the Backup server.
- Open the database from required backup in read write mode.
- **That's all!**
- Time to complete the procedure is measured in minutes!
- No DBA intervention! (no cost)

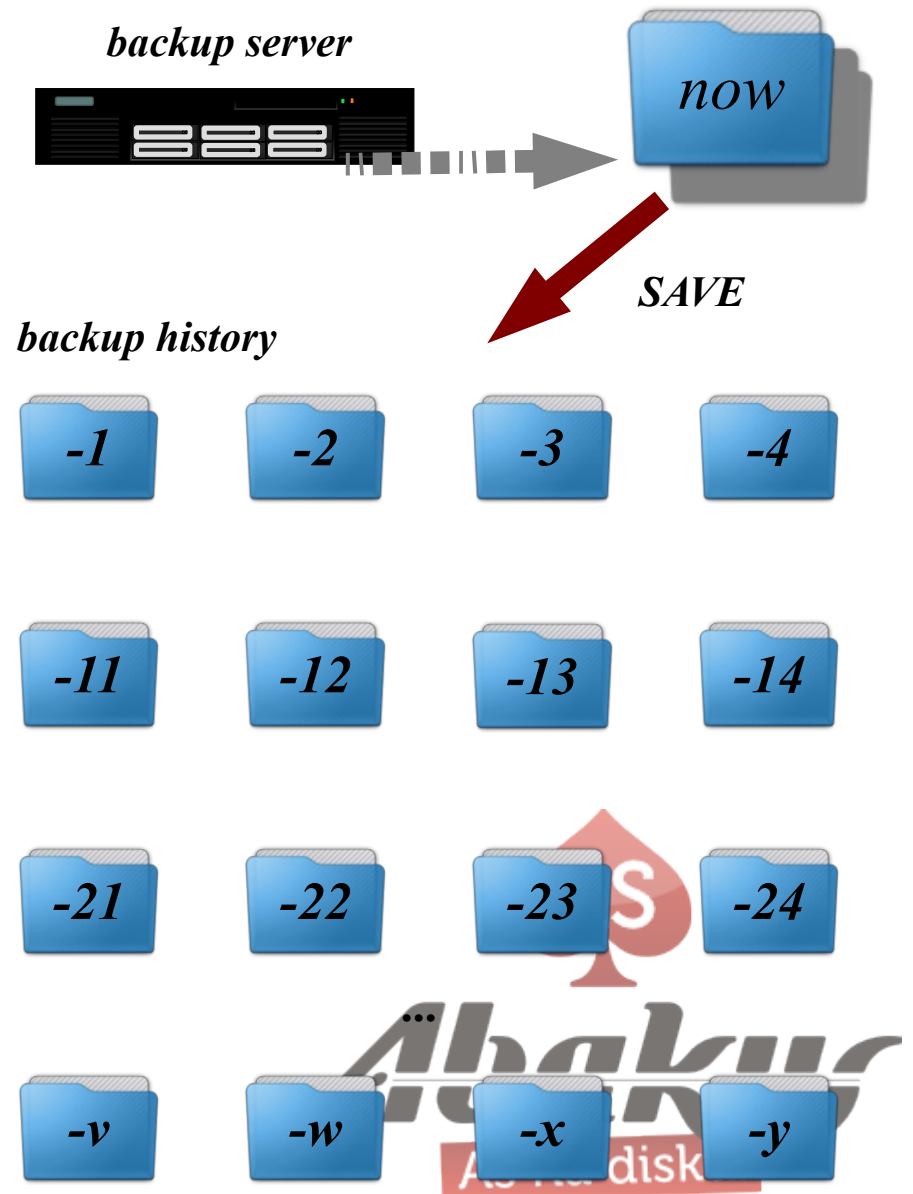

Backup server: behind the scene

... and history

- snapshot
- save snapshot
- Time and resources are consumed exclusively on backup server. dodaj piko
- Backup occupies a lot of disk space !? zbrisj presledek do !?

... and (almost) no disk space

... by using data deduplication

- snapshot
- save snapshot **to deduplicated area**

Example:

- DB size 1 TB
- 1% changed/added data per day (~10 GB)
- ~200 days backup fits on 3 TB disk drive

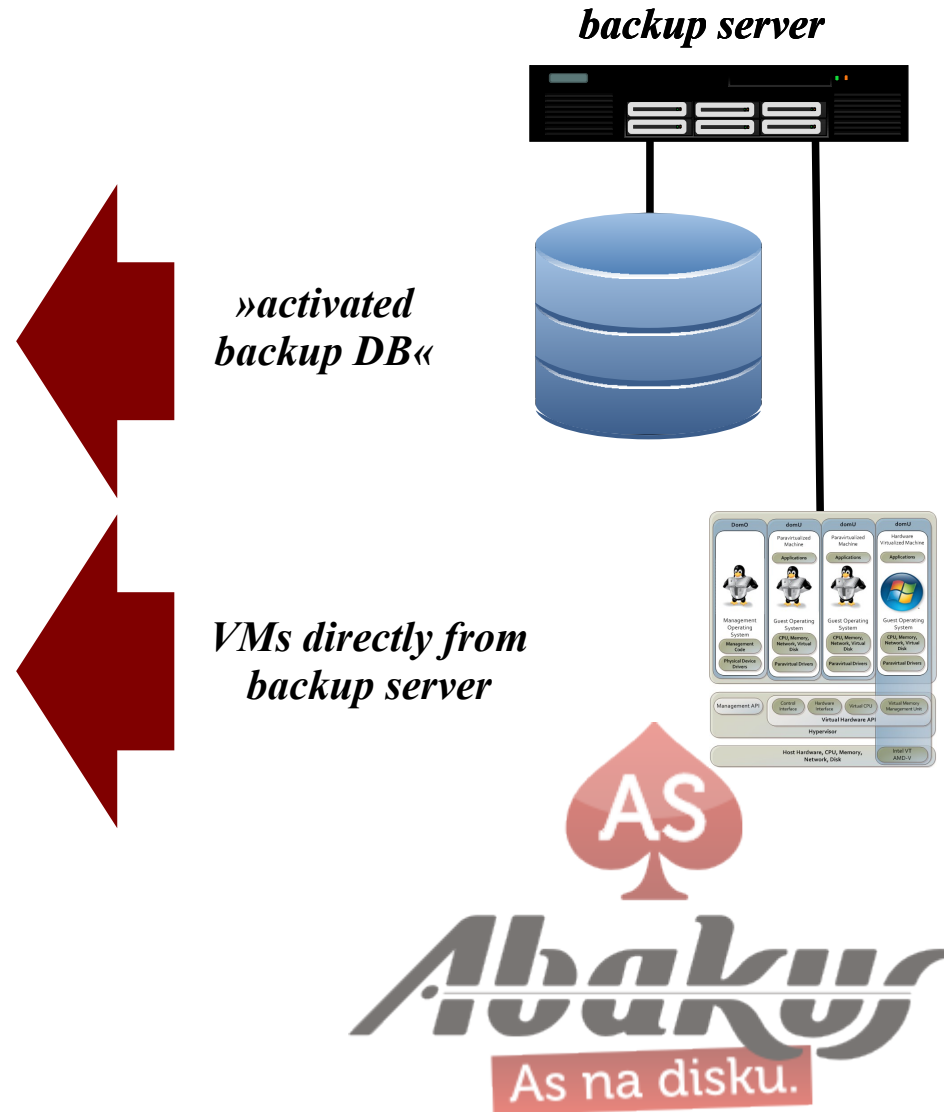

Recovery in no time – scenario 1

Recovery as a Service (RaaS)

- services are offered directly from the backup server

**BACK IN BUSINESS
IN NO TIME!***

* real restore in more appropriate time

Alternative use

- BI – business analysis purposes
- reporting
- development & test

Recovery in no time – scenario 2

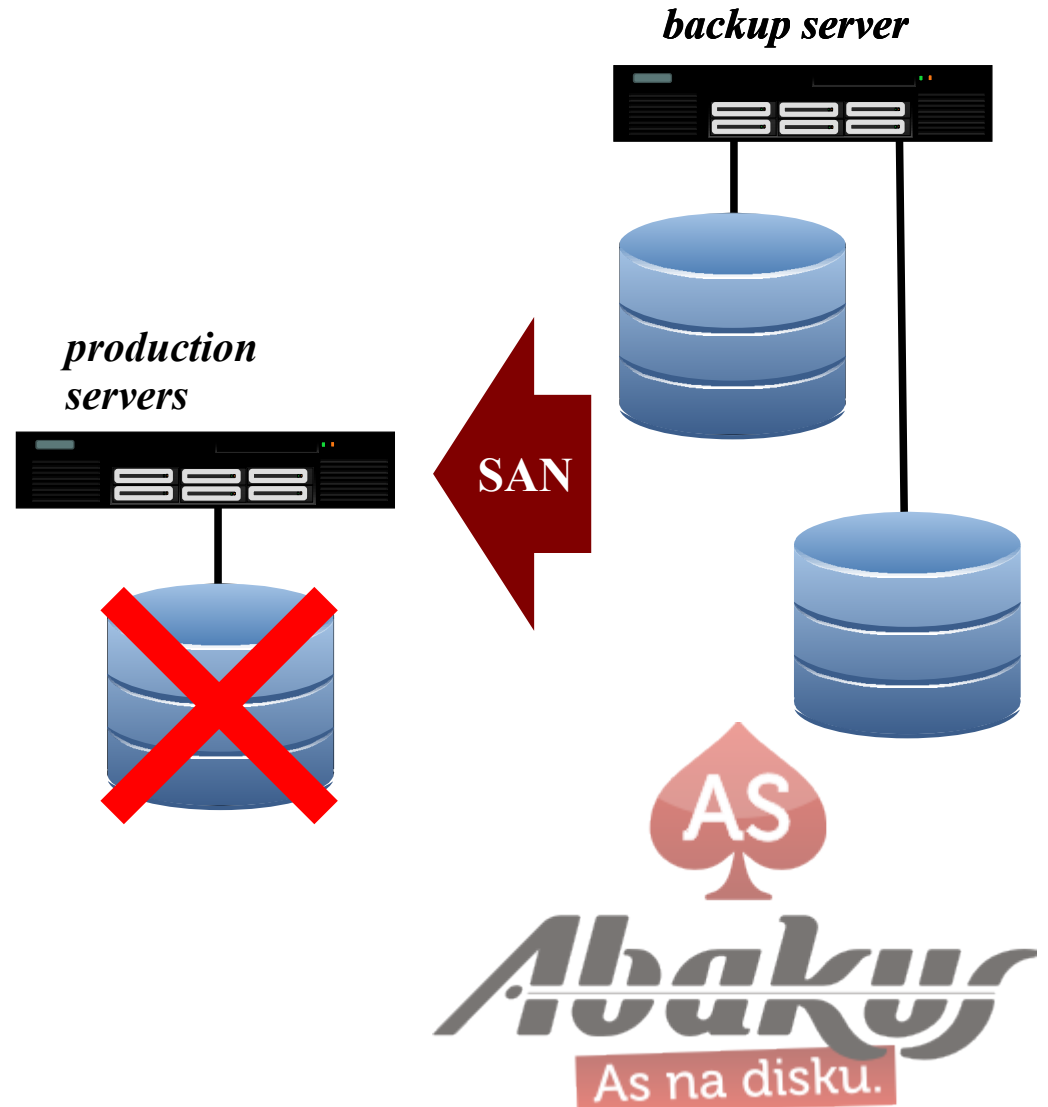

Recovery as an Infrastructure

(change role to SAN storage)

- backup server works as a SAN storage infrastructure to production servers

**BACK IN BUSINESS
IN NO TIME!***

* real restore in more appropriate time

Space utilization

Bank

- Everyday backups.
- 5 databases, largest 13 TB.
- Total disk capacity 60 TB.
- Total saved since 1/Aug/2014 300 TB.
- Still available free space 40%.

Performance and diagnostic tools

- Hidden cost – licences for diagnostic and performance pack (active session history).
- Third party diagnostic and performance packs.

APPM – Abakus tool

- Own ASH implementation (work with Oracle Active session history too).
- No need for diagnostic and performance pack.
- Works on Standard and Enterprise edition.

APPM – Abakus tool (2)
